

Customer Application Note Program

At Dionex we are proud of our large collection of Application Notes, Application Updates, and Technical Notes, but we know that our customers use our equipment, columns, software, and sample preparation products for applications we never imagined. Now Dionex customers have the opportunity to publish their novel applications on Dionex.com as Customer Application Notes. Unlike a Dionex Application Note, a Customer Application Note will have authors listed. Like a Dionex Application Note it will have an assigned number (e.g., Customer Application Note 105) and other customers will be able to download it from Dionex.com as a PDF. The Customer Application Note will also have a month and year of publication.

1. E-mail a well-written document in the form of a Microsoft Word document to jeff.rohrer@Dionex.com. Figures should be provided in either PowerPoint (.ppt) or Adobe Illustrator (.eps) format. If the figure contains a chromatogram we would also like the submission to include a Chromeleon .cmb file containing the chromatogram. It may be possible for Dionex to work with other word processor and graphic display softwares, but please contact Dionex before submitting files from other formats. The format of the document is flexible but Dionex suggests Title, Authors, Introduction, Experimental that includes Equipment, Materials, Methods, and Results and Discussion that includes a Conclusion or a summary paragraph.
2. Dionex will review the document for clarity, Dionex product accuracy, trademarks, and novelty relative to other Dionex and Customer Application Notes. If Dionex believes the document will make a good Customer Application Note, the document will be returned with suggested edits. Dionex may also write a paragraph to add to the prospective Customer Application Note. This paragraph will be "Dionex Comments" and can include a variety of the types of information, including a comparison between the Customer Application Note and existing Dionex or Customer Application Notes, alternative equipment the application can be executed with, and other Dionex columns that could improve the application.
3. If you wish to proceed with your submission, make the suggested edits, review and either edit or approve the Dionex Comments section, and return the edited document along with a completed copyright form. Briefly, this form states that the figures have not been used in other publications. It also states the Dionex will freely share the Customer AN figures with other parties (see below).
4. Dionex will then put your document in the Customer Application Note format and you will have a chance to review it again before it is posted on Dionex.com.

Customer Application Note Permission Form

I hereby permit Dionex to use the following Customer Application Note and the data contained therein.

I understand that Dionex retains the copyright to the formatted version of the Customer Application Note, and a non-exclusive license to use the material contained in the note for advertising, sales literature, or other collateral promoting Dionex products and services. The author(s) retains the copyright to the material, and may publish the research and data elsewhere.

I, the undersigned, hereby certify that the data, research, and text contained within this Customer Application Note is not licensed to or owned by any other party, and that Dionex has full permission to use this material as stated above.
